#9 Test Switch On Panel

This bulletin is to address the possible danger of the engine not being able to be shut off because of the **NORMAL/TEST** switch in the panel. If you select the test option while the engine is running there is no way to shut the engine off safely. The switch will have to be put back in the normal position to be able to use the **OFF** and **E-STOP** selections.

One example of this issue is if a technician is using a remote/jumper starting switch while in test mode. Once the engine is cranked over with the remote switch it will start and won't be able to be shut off until put back into normal mode.

The test switch is used only for setting engine parameters with the MFG. SOFTWARE.
